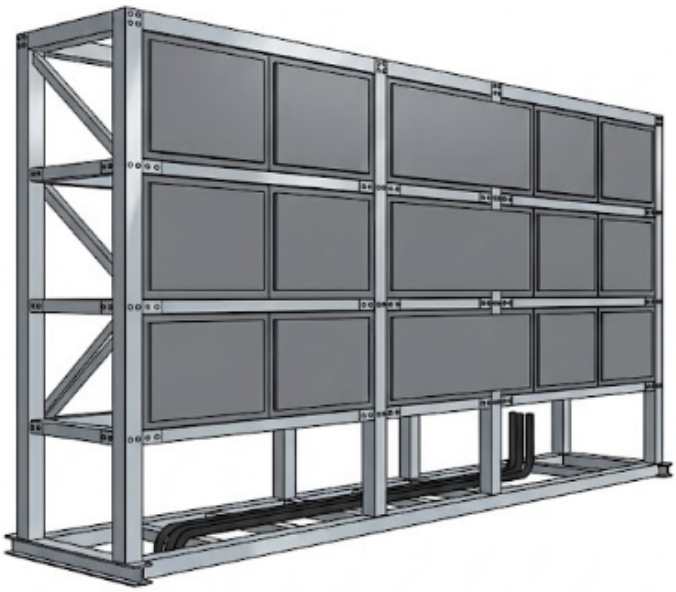
LED Display Installation Materials & Structure

1. Structural Framework

- Metal Framework: Fabricated using high-grade mild steel box pipes and angles to ensure strength and rigidity.

1.1: Structural Framework of Indoor LED Display



1.2: Structural Framework for Outdoor LED Display

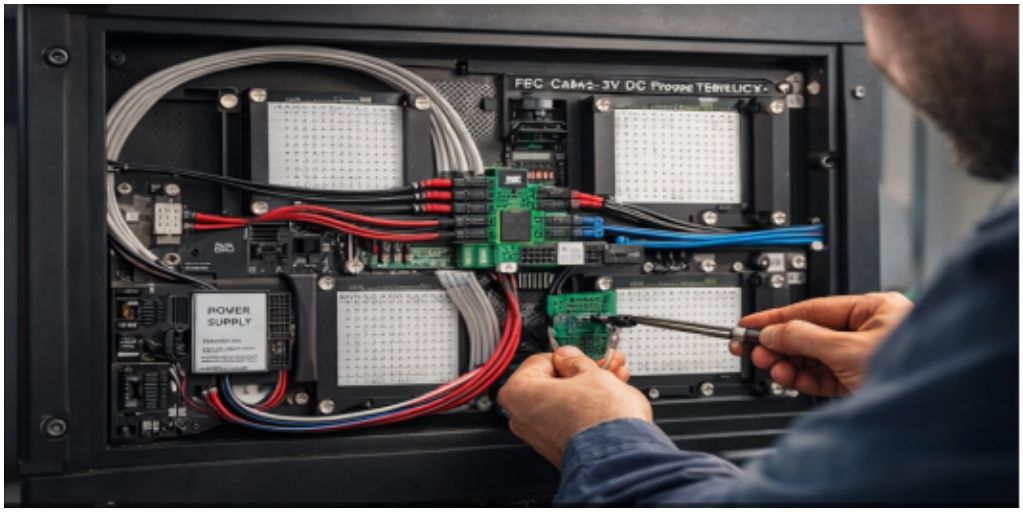
- Surface, Cladding & Aluminum Composite Panel:
    - PVC Sheet – used for the rear panel and internal cladding for protection and aesthetic finishing.
    - Aluminum Composite Panel ensures strong, lightweight, and weatherproof protection for LED displays.

1.3: Surface, Cladding & Aluminum Composite Panel for Indoor LED Display

1.4: Surface, Cladding & Aluminum Composite Panel for Outdoor LED Display

2. Cabling & Electrical Components

- FRC Cable: Used for power distribution within the cabinet.
- Electrical Cable: Used for internal board-to-board connections (excluding main power input).
- Cat-6 Data Cable: Used for data/control transmission between internal modules.



3. Fasteners & Accessories

- Screws (various sizes): For securing panels, sheets, and structural joints.
- Additional Accessories: Includes nuts, bolts, washers, and other hardware required for fabrication and assembly.

Note: The images provided show the visual representation of our frame, highlighting details related to structural components, electrical systems, and fabrication materials
